

Product Information

Three Phase Monitoring Relay

Function Monitoring of Buildings, Machines and Systems.

PFD3-E12
P/N 110292032230

Measuring Ranges

Phase Sequence

- > L1-L2-L3 (direction of rotation to the right)

Phase Failure

- > monitoring of phase voltage in case of complete failure
- > monitoring of zero connection on the device (terminal N)

Benefits

- ✓ space-saving and compact design in a 22.5 mm slim industrial housing
- ✓ two relay contacts for error display and switch off motor contactors
- ✓ power supply direct from measuring circuit

Machines and systems are operated cost-effectively, therefore important functions must be precisely monitored. The early detection of failures serves to protect man and machine and prevents costly damage. The METZ CONNECT three phase monitoring relay is used for the safe monitoring of your system. By monitoring the most important system parameters, you don't only benefit from operational reliability but also from high availability of your system.

The three phase monitoring relay monitors the correct phase sequence and completes failures of individual phase voltages. In addition, the zero conductor is monitored by the PFD3. The device is supplied via the measuring circuit L1-L2-L3-(N). If the phase sequence is correct, the output relay is activated (green LED is on). In case of total failure of a phase or the zero conductor, the output relay returns to its neutral position (green LED is off).

PFD2-E12

Machines and systems

Monitoring of mobile motors on a right rotating direction.

Drilling-machines

Saws

Aggregates & Pumps

Drilling-machines

Saws

PFD3-E12

Building and home automation

Monitoring of electrical cabinets in critical objects on phase failure.

Hospitals

Museum

Data Centers

Order Overview

		
Type	PFD2-E12	PFD3-E12
P/N	110292032215	110292032230
Functionality		
Phase Sequence	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Phase Failure	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Zero connection	-	<input checked="" type="checkbox"/>
Supply and Measuring Voltage	L1-L2-L3 400 V	L1-L2-L3-N 400 V/230 V
Contacts	2 x Changeover Contact/(6 A/250 V AC)	2 x Changeover Contact/(6 A/250 V AC)
